

**Task:**

We want to evaluate your creativity, and we'd like you to take this task as far as you believe it needs to go.

**Objective:**

Develop a web application for warehouse inventory management using the Angular Framework (version 16 or later). The application should provide the following features:

- A product list display.
- Functionality to add, edit, and delete products.
- Manage different access levels (e.g., admin, users) to control permissions.

Feel free to apply your own creative approach and enhancements to the task.
